

Nature heals and science enhances. Our genetically modified plants draw on millions of years of evolution and cutting-edge medical research to create an organic solution to clinical waste. Each cutting grows into a medicinal plant infused with natural antiseptic, anti-inflammatory and painkilling properties. But that's not all! The leaves are surgical-grade dressings, and the stems can be used as sutures to close wounds. Our kit uses solar power, water vapour collection, and soil made from hospital waste to provide truly sustainable care.

(Your insurance may not cover ReLeaf Products — please check your policy)  
Plants are sterile and seeds must be purchased directly from SurgoBiotica Inc. Accept no imitations.

Heat and drought resistant
